SUMMARY

Full-stack developer with commercial experience building React SPAs and REST APIs on Node.js and C#/.NET, deployed to cloud-hosted environments. Comfortable writing automated tests alongside new features, working with SQL databases, and adapting quickly to changing requirements and customer feedback.

SKILLS

Primary: JavaScript (ES6), TypeScript, React, Node.js, REST APIs, C#, .NET Core / ASP.NET WebAPI
Cloud / Infra: Azure (App Services, Service Bus, Key Vault, Table Storage), Docker, Kubernetes, microservices
Data: MS SQL, PostgreSQL, RDBMS/SQL, relational and non-relational data modelling, OData/REST API design
Practices: Full SDLC ownership, functional/unit/integration testing, GitHub Actions CI/CD, Agile/Scrum, code reviews
AI Dev Tools: Claude Code, GitHub Copilot

EXPERIENCE

Software Developer

Jul 2022 – Nov 2023

Conexiom — Vancouver, BC

- Developed full-stack features end-to-end in C# (.NET) and React on Azure, owning the complete engineering lifecycle from requirements elicitation and design through implementation, testing, deployment, and operational support.
- Wrote unit and integration tests and built/maintained GitHub Actions CI/CD pipelines, catching regressions before release and keeping deployments reliable across the team.
- Designed and built scalable REST API web services and microservices on Azure, applying cloud-native architecture patterns to deliver reliable, high-performance integrations with enterprise ERP platforms (SAP, Salesforce, MS Dynamics).
- Contributed to dependency identification and design documentation, breaking down larger work items into smaller, estimable tasks and delivering on sprint commitments in a collaborative Agile team.
- Built and maintained monitoring and alerting infrastructure that reduced on-call overhead by 30%, acting as a responsible individual for production system health and gaining hands-on experience with observability at scale.
- Innovated with AI-powered coding tools (GitHub Copilot) and collaborated across engineering and non-engineering functions to ship faster without compromising quality.

Technical Support Specialist

May 2019 – Aug 2019

Novus Entertainment — Vancouver, BC

- Resolved 99% of complex technical escalations through systematic problem-solving, reducing customer complaints by over 30% and demonstrating strong verbal and written communication skills across technical and non-technical audiences.

PROJECTS

Augury

github.com/susansli/augury

- Built a full-stack investment recommendation app with a React frontend and a Node.js REST backend, integrating LLM APIs through a secure, OAuth2-aware architecture deployed to the cloud.

WaterMania

github.com/gandhis88/water-mania

- Developed a custom 2D game engine from scratch in C++ with SFML, designing and implementing a high-performance, modular architecture using core CS fundamentals and OOP design patterns with no existing codebase to reference.

EDUCATION

BSc in Computer Science — British Columbia Institute of Technology (BCIT), Completed June 2026
